evaded gateway security

Share of email threats that bypassed the security gateway

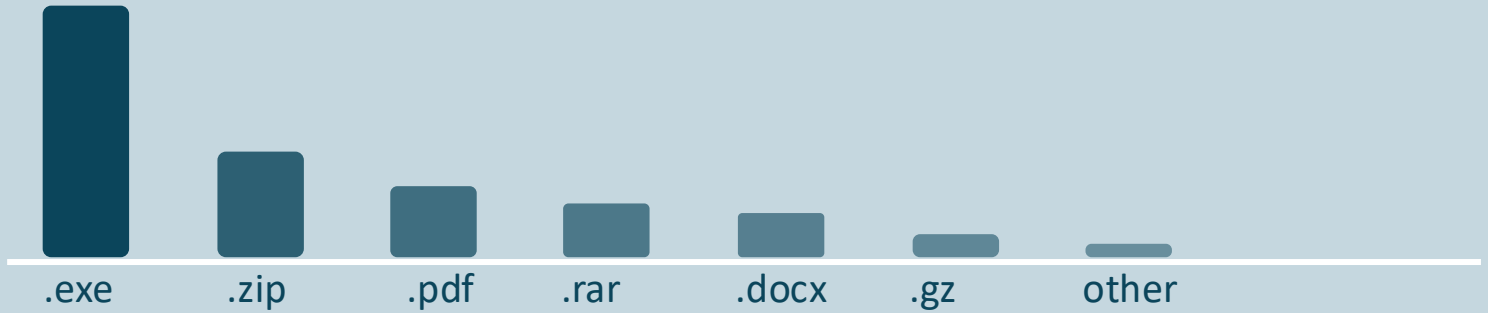

HOW MALWARE WAS DELIVERED

39% — Executables & scripts
38% — Archives
23% — Documents

Share of observed threat deliveries

TOP MALWARE FILE EXTENSIONS

Most frequent file types in detected malware

Publication Date: June 2026

ENDPOINT ISOLATION

Advanced Protection Technology

HOW IT WORKS

Endpoint software virtualizes individual tasks.

Each high-risk task runs in its own micro-VM.

TASKS ISOLATED

- Email attachments
- Office documents
- Browsing
- USB drive files

AUTOMATIC CLEANUP

The micro-VM is destroyed when the task ends, removing any malware it may contain.

HP WOLF SECURITY

HP Wolf on top of Endpoint Detection & Response (EDR)

BUILT ON ZERO TRUST

ISOLATION

FIRST LINE OF DEFENCE

HP applies Zero Trust design principles across the Wolf Security portfolio, with a “never trust, always verify” approach.

A LAYERED SECURITY LIFECYCLE

IDENTIFY | PROTECT | DETECT | RESPOND | RECOVER

Endpoint Detection & Response (EDR)

ANTI VIRUS

SECURITY FOUNDATION

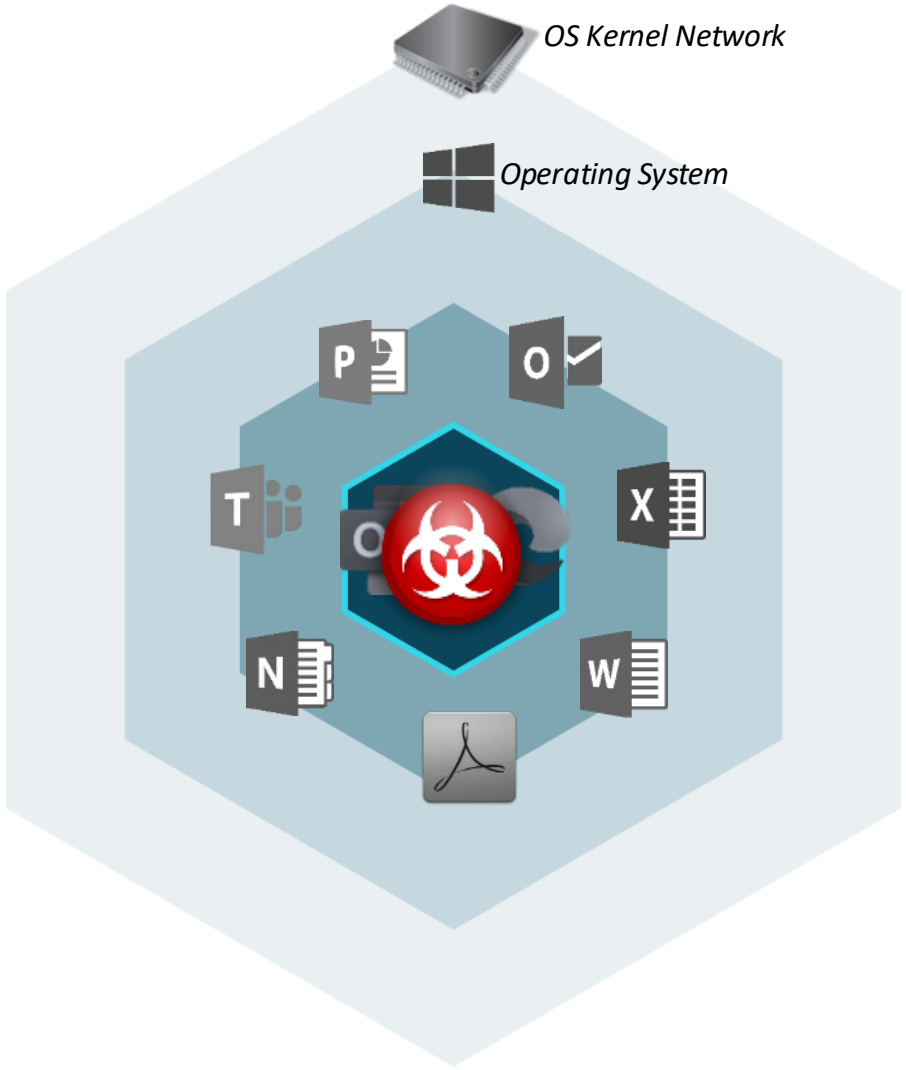

Normally the AV Suite is already in place.

ANTIVIRUS

HP WOLF SECURITY

HP Wolf Security Solution is based on ISOLATION

ISOLATION LAYERS

ISOLATED EXECUTION

Works in a virtual machine, isolated from the complete system.

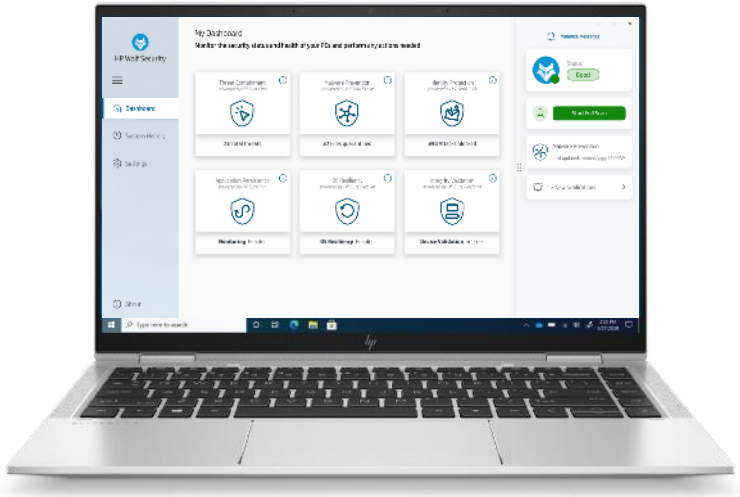

WHAT THIS MEANS

1. No performance impact
2. Threats disappear once the browser, email, or file is closed
3. Visibility through a dashboard

HP WOLF SECURITY

Endpoint Security Software for SMB

Wolf Pro Security Edition PCs

Pre-loaded on select HP PCs

Protection right out-of-the-box

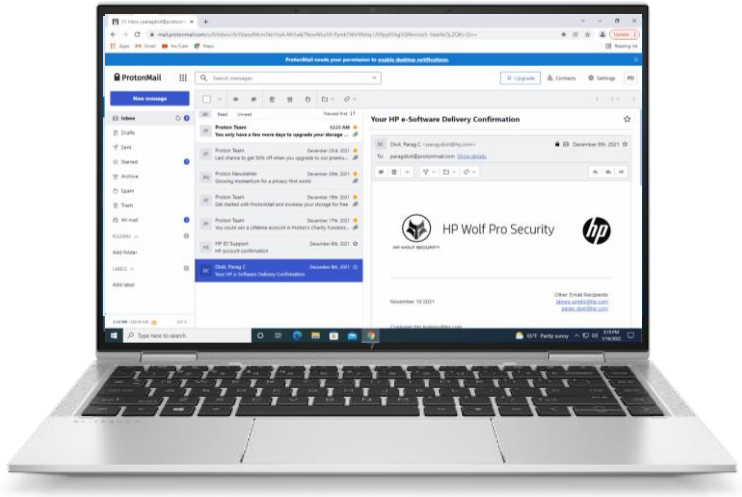

Cloud-based Management & Reporting (Registration required)

Threat Containment

Next-Gen Antivirus

Credential Protection

Wolf Pro Security (Standalone Software)

Licenses for HP or non-HP PCs

Fleet expansion and/or WPSE renewal

Cloud-based management & reporting (Available on license activation)

Managed Device Service

Managing a fleet of mobile PCs is increasingly difficult

Hybrid work, temporary staff, and edge computing create challenges in two broad categories

Asset Management

- Accurately track PC hardware across the lifecycle
- Avoiding lost productivity and increased costs

Data Security

- Maintain control of data
- Avoid costly and embarrassing data breaches

Existing fleet management solutions require the PC being on, and network connected

What happens when the device cannot reach the network?

THE OFFLINE CHALLENGE

But what if the PC is…

Not on a network
Remote management cannot reach the device

Powered down
The device is shut off and unavailable

Not able to boot
The operating system cannot start

We’re out of luck!
When the PC is unreachable, traditional fleet tools may be unable to act.

HP Protect and Trace with Wolf Connect

A GAME CHANGER

Remotely Find, Lock, and Erase a PC globally, even if it’s turned off!

THREE REMOTE ACTIONS

Find

Locate device in real time

Lock

Temporarily lock a PC that has gone missing

Erase

Erase PC data on unrecoverable or retired PC

HP Protect and Trace with Wolf Connect

A CONNECTED MANAGEMENT LAYER

- Wolf Connect is a low-cost cellular-based management connection to HP PCs.
- It allows IT to interact with their PC fleet globally, even when offline or powered down.
- It is the infrastructure that allows IT to reliably communicate with the PCs.
- HP's vision is to use Wolf Connect to support multiple HP offerings and applications over time.

Wolf Connect Components

BUILT INTO SUPPORTED HP PCs

Narrowband cellular card (MNB)

- Uses LTE-M standard for low cost and low power consumption
- [4 or 5G broadband card also supported]

Special Cellular Subscription

- Provided by HP
- Dedicated to Wolf Connect (does not provide Internet access for user)
- Global reach

HP WOLF SECURITY

Wolf Connect Components

When a PC is lost or stolen…

Here's how HP Protect and Trace with Wolf Connect will help

User loses PC

User reports loss to Help Desk

Help Desk remotely locks PC

Help Desk reports PC location to user

If PC recovered

Help Desk gives "unlock code" to user

Access can be restored after the PC is recovered.

If PC unrecoverable

IT obtains approval and remotely erases PC

Protect company data if the device cannot be returned

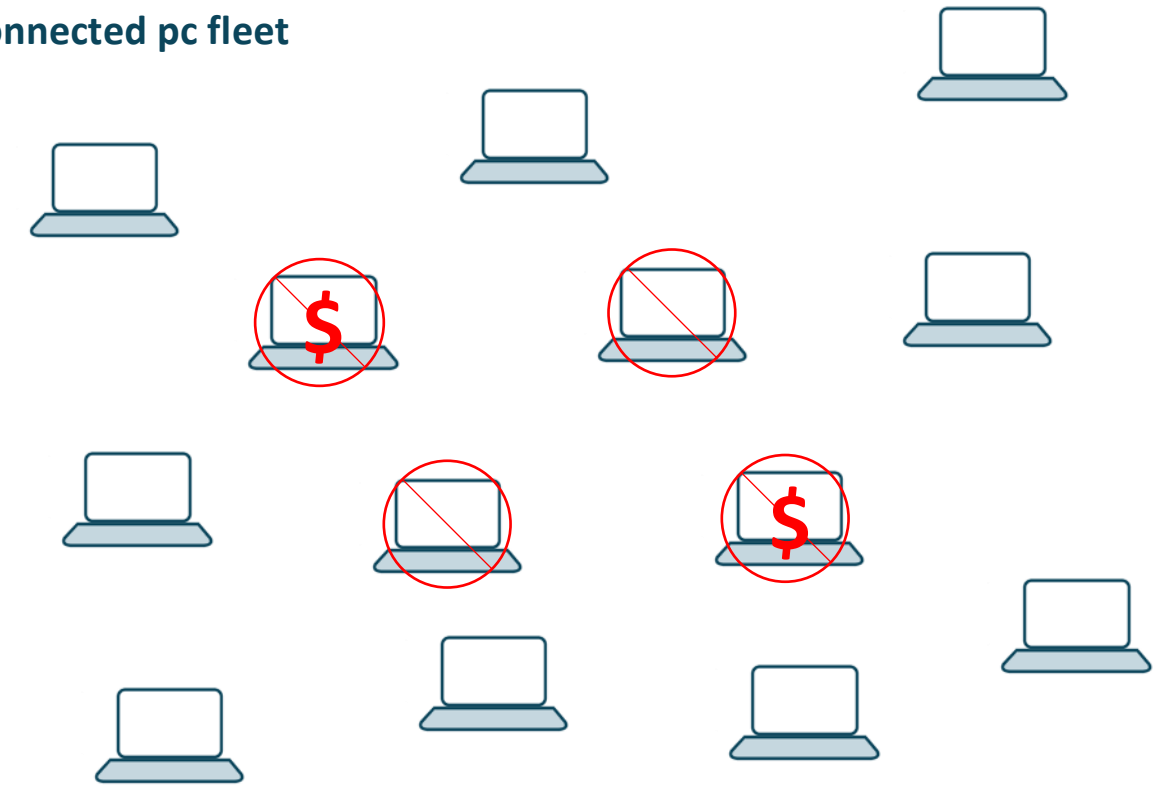

HP WOLF SECURITY

Protect and Trace Wi-Fi Only Option

All Situations

1. Existing PC fleet
2. Unsupported PC models/countries
3. Budget constraints

A connected pc fleet

An alternative is required for these situations

HP WOLF SECURITY

Protect and Trace Wi-Fi Only Option

A COMPLEMENTARY OPTION FOR THE COVERAGE GAPS

Protect and Trace without Wolf Connect

Alternative protection for devices outside Wolf Connect coverage.

Find, Lock, Erase capabilities at a lower cost, with broader PC support

Broader device coverage at a lower cost.

Device requirements PC must be powered on, booted, and connected to the Internet.

Requires power, a working operating system, and Internet.

Unified Solution WXP management and agent software

Use Wi-Fi only offering to cover the gaps not covered by Wolf Connect

HP WOLF SECURITY

Protect & Trace—Wi-Fi only offering

A flexible option for use cases where Wolf Connect may not be the right fit.

SCENARIO GUIDE

Use Cases

- Existing Fleet (installed base)
- PC or country not supported by Wolf Connect
- Use case or risk level can’t justify Wolf Connect price point
- Scenarios best met by a combination of Wolf Connect and Wi-Fi P&T

HP WOLF SECURITY

HP Protect and Trace with Wolf Connect

KEY BENEFITS

- Protect sensitive data
- Improve Asset Management
- Help lower IT costs and improve responsiveness
- Meet audit and compliance control requirements

Thank You
